

Follow the steps below to enable Single Sign-On (SSO) for BI Reporting (BEx):

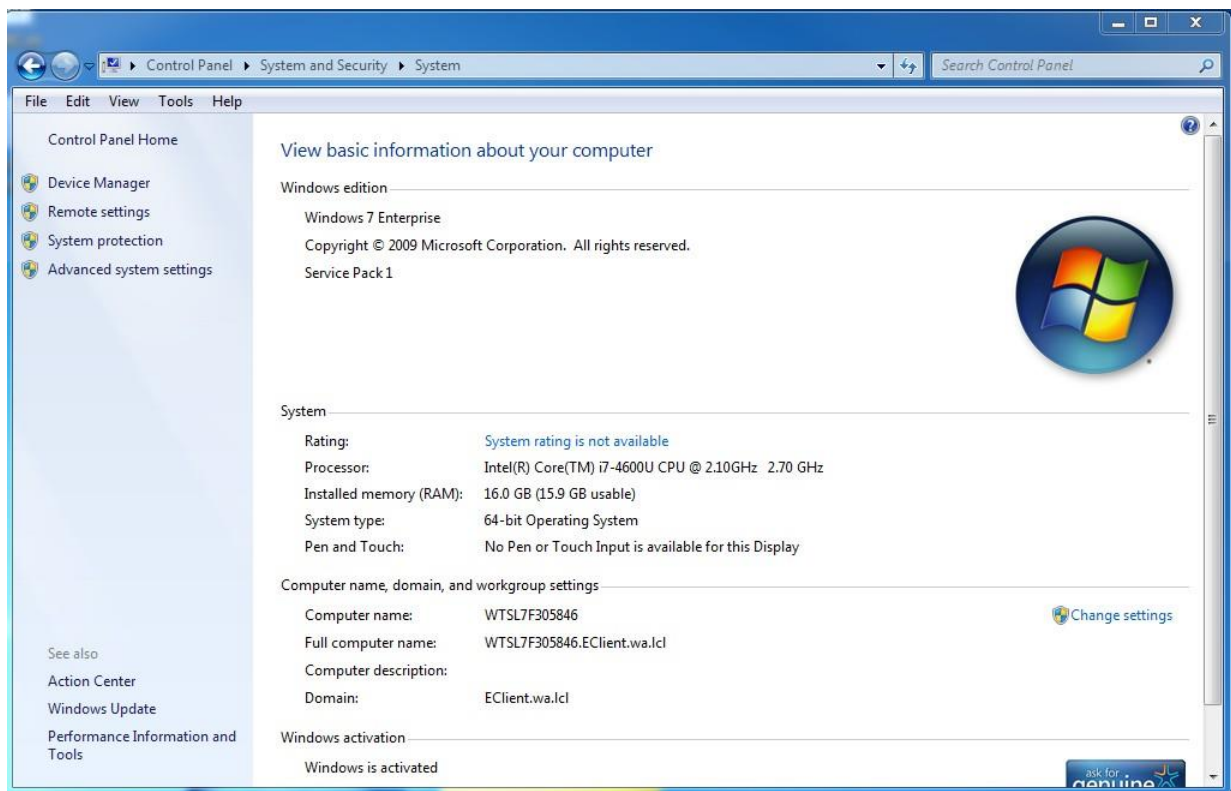

An Environment variable **SNC_LIB** must be added to both User Variable and System Variable on the user's desktop computer to enable Single sign-on (SSO) for BEx while using SAP GUI 7.40. It may require your agency IT staff to perform this task. **If workstation is running on 64-bit Windows operating system the Environment variable **SNC_LIB** needs to set to **C:\Windows\SysWOW64\sncgss32.dll** ***

***Be sure to check if the file **sncgss32.dll** file is physically in **C:\Windows\SysWOW64** folder. If not, copy the sncgss32.dll file from **C:\Windows\system32** folder or you can locate it inside of the SAPGUI740PRO.zip file of the HRMS Technical website download page.**

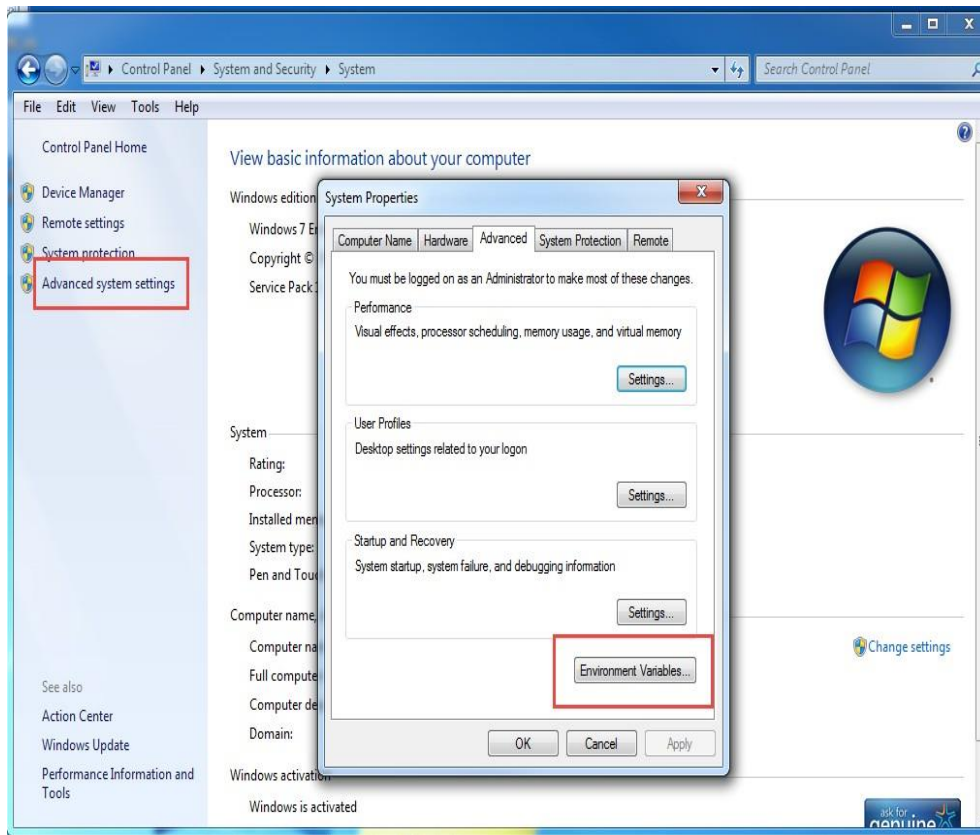

Please follow steps below:

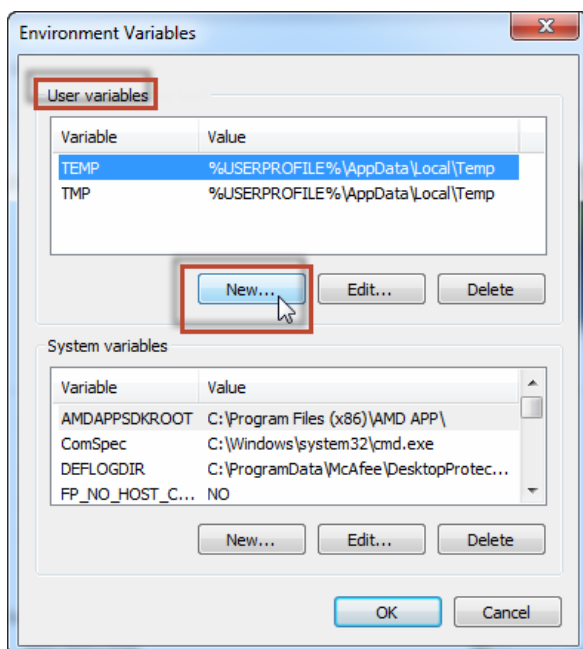

Windows -> Control Panel -> System Security -> System

Click **Advanced system settings** → select **Environment Variables**

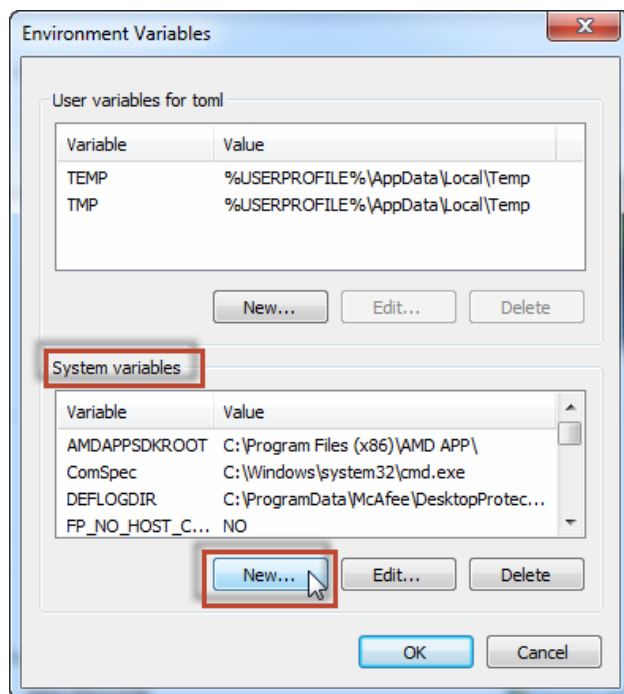

Click on **New...** from the **User Variable** area and enter the following information

Variable name:	SNC_LIB
Variable Value:	C:\Windows\System32\sncgss32.dll or C:\Windows\SysWOW64\sncgss32.dll
Click ok .	

Repeat the step above for **System Variables**.

Variable name:	SNC_LIB
Variable Value:	C:\Windows\System32\sncgss32.dll or C:\Windows\SysWOW64\sncgss32.dll
Click ok .	

Restart your PC and login to BI using the SSO option and you should not get a prompt for password.
